

OTHER FEATURES

Layers Demographics Workforce Custom Reports **Clear Map** Share My Favorites 0

The **Clear Map** feature removes anything that you have “drawn” on the map, including map layers, buffers for reports, text and graphics.

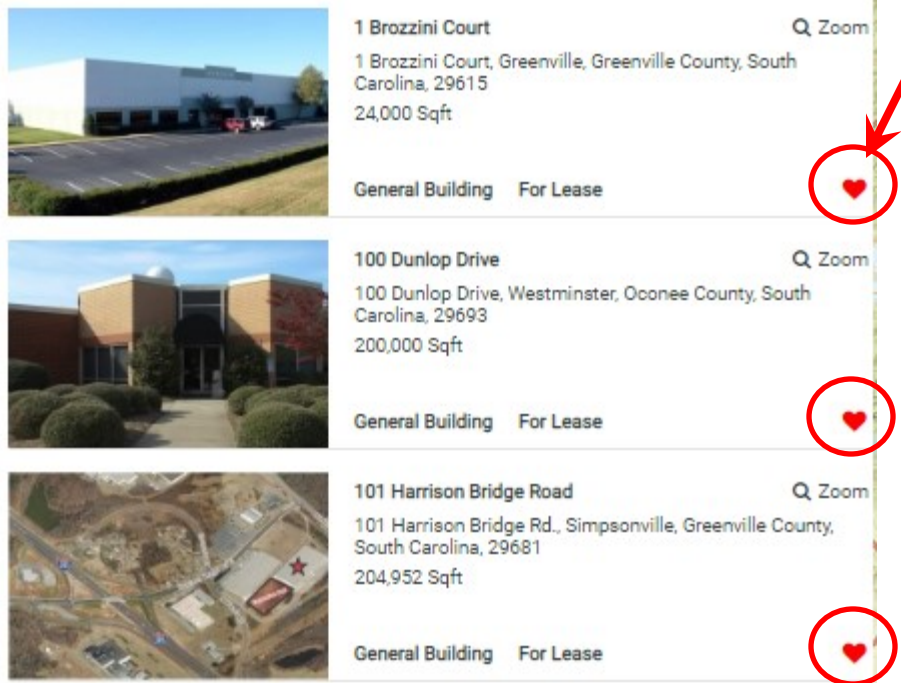

Layers Demographics Workforce Custom Reports Clear Map **Share** My Favorites 0

The **Share** feature enables you to share the map by generating a link that can be copied and pasted into an email. The recipient will see the map as you see it, including any map layers that have been displayed or graphic elements that have been added.

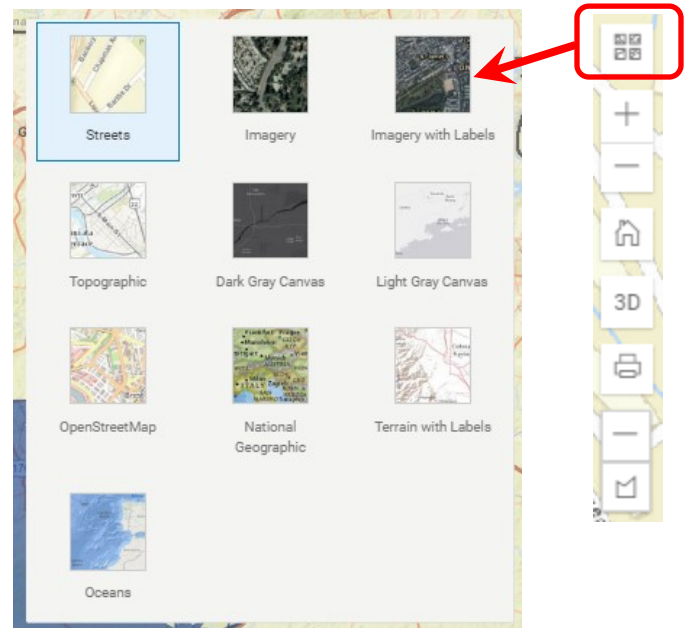

The **My Favorites** feature enables you to isolate records that you have identified as “preferred” or “favorite” properties within your property search results.

MAP DISPLAY & NAVIGATION TOOLS

The **Change Base Map** icon enables you to choose from Among 10 different ESRI base maps.

MAP DISPLAY & NAVIGATION TOOLS (continued)

The **Zoom In** and **Zoom Out** icons enables you to incrementally zoom in to a closer area of the map or to zoom out to a wider view.

If you have changed the default map extent by zooming in or zooming out, clicking the “home” icon will return the map to the default extent, which **shows the entire EDO boundary**

To see a **3D view**, first change the base map to one of the **imagery** options, then click the 3D icon. For best results, zoom in to an extent of 10,000 or closer (see Print option below for instructions on how to determine the current map extent).

MAP DISPLAY & NAVIGATION TOOLS (continued)

The **Print** function enables you to print or export a **Map Layout**, complete with title and legend.

Enter **Map Title**

Select **Page Size and Orientation**

Select **File Format** (PDF or a variety of image formats)

Under Advanced Options:

If you want to “fine tune” the extent to which the map view is zoomed in or out on the map layout, check the **Set Scale** option, then modify the value of the view extent. Decreasing the value zooms the map in closer, while increasing the value zooms the map out farther.

Enter **your name or the name of your organization**

Enter **Copyright Date**

After all print setting have been specified, click **Export**

The **Measure Distance** tool enables you to measure the distance between two or more points. You may choose from a variety of measurement units (miles, kilometers, etc.)

The **Measure Area** tool enables you to measure the area of any polygon “drawn” on the map. You may choose from a variety of measurement units (acres, square feet, square miles, etc.)
